

Drones

By: Katherine [REDACTED]

Drones are a great advancement in technology. However, we need strict rules to keep people around the drones user safe physicaly and emotionally.

A reason that I support drones being allowed is that we can make great; new discoveries. The reason for my statement is that robots or drones can go places humans can not; like the cenote and sink holes in Florida,U.S.A. Another place is the great snow caverns in Antartica.

The reasons that I think we should have strict rules for drone use is because if we use drones in wild life activities then we could start over hunting, fishing,or even both! Another reason that there should be strict rules for drone use, is If there are not more strict rules on flying a drone near airplanes, helicopters,and/or airports, their may be a fatal crash.

In conclusion drones have a great future, but we need to keep our eyes peeled on how the future develops with drone usage.
